- High-resolution 19" touch screen display
- Optional 110 V power outlets to charge tools & equipment

L5 CONNECT(TM) Software

Control tools and assets across the facility via single interface. Seamlessly move tools from one connected device to another. Customizable and efficient audit mode available.

Intelligent and Easy to Use

See-through windows with bright LED lighting allow the user to quickly identify the items they want and issue them through an intuitive touch-screen user interface. Multistate LED status lights quickly identify which items are out on the floor as well as the status of the items that are inside the lockers. Efficiently check tools in and out of the locker. Work at the speed of work. Assets are accessible without requiring additional personnel.

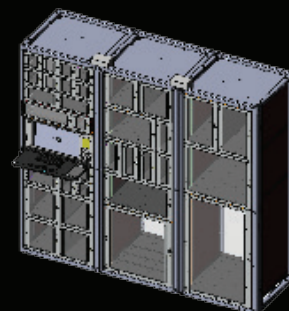

Rack-Mounted Modular Design

The rack-mounted approach gives the user the flexibility to custom configure the locker layout to their specific needs. A multitude of module sizes maximize the efficiency for the given footprint and control a wide range of items. As storage needs change the modular design allows the user to easily swap out modules.

Power Charging

The ATC FlexHub is available with optional 110V power outlets within each module so battery operated tools and equipment can be charged while in the locker.

Locker modules are available in 6" high increments with a standard 24" depth and a wide variety of widths and power (optional) to provide the most efficient customized solution. Connect multiple frames together utilizing 1 controller box.
